

“ Brings together research infrastructures, core facilities, business management Schools and European universities. ”

Enhancing Managerial Skills in Research Infrastructures

Managerial Excellence Matters

Research infrastructures (RIs) are complex entities operating at the forefront of scientific and technological innovation.

Effective management requires a blend of scientific, technical, managerial, and diplomatic skills.

Skilled personnel are essential for balancing scientific priorities with operational sustainability.

The Innovative Concept

A collaborative initiative uniting RIs, Core Facilities, business schools, and universities across Europe.

Emphasis on professionalizing management to ensure efficient and sustainable RI operations.

The key goals are to define RI manager competency profiles, deliver targeted executive education for medium and senior managers, develop scalable "Train the Trainers" programs, and implement personalized coaching and mobility initiatives.

Community of Practice

A dynamic platform fostering collaboration and peer learning.

CoP Activities

Regular community meetings and workshops focus on key managerial and operational challenges.

Provides

Discussions on critical topics.
Access to recordings and meeting materials.
Opportunities to learn from experts and stay updated on best practices.

Key Outcomes and Benefits

Enhanced managerial capacities across European RIs and CFs.

Strengthened collaboration and knowledge-sharing among international stakeholders.

Sustainable operational frameworks for RIs, fostering innovation and scientific advancement.
